

Quiet Horizons

A guide to the demo library

Omaroll reads the folders Omarchy already writes captures to. Pictures, screen recordings, downloads: whatever is there is listed by day, newest first, and nothing is imported or copied.

Open a picture and move through its folder with the arrows. Select several files and they open in the order you picked. Search matches names, captions and the text inside pictures.

Favourites, ratings, captions and albums are marks, not edits: they never touch the file, and Ctrl+Z steps back through them.

Documents

PDFs scroll at the window width, or fit a whole page.

Find searches the document, and Copy page text takes one page.

Select text takes just the words you drag over.

Every page is read locally through Poppler.
